PAGE NO

DO NOT CHANGE ANY MODULE UNLESS THE SET IS SWITCH OFF.

The mains supply side of the switch mode power supply transformer is live Use an isolating transformer.
The receivers fulfill completely the safety requirements.

Safety precautions

Servicing of this TV should only be carried out by a qualified person.

- Components marked with the warning symbol on the circuit diagram are cristical for safety and must only be replaced with an identical component.
- Power resistor and fusable resistors must be mounted in an identical manner to the original component.
- When servicing this TV, check that the EHT does not exceed 27KV.

TV set switched off :

Make short-ciccuit between HV-CRT clip and CRT ground layer

Short C808 (150μF) before changing IC801 or other components in primary side of SMPS.

Measurements

Voltage readings and oscilloscope traces are measured under following conditions :

- Antenna Signal 60dBμV from colorbar generator. (100% white, 75% color saturation)
- Brightness, Contrast, Color set for a normal picture
- Mains supply, 220V AC, 50Hz.

1. INTRODUCTION

11AK12 is a 110 degree chassis capable of driving 28 inch tubes at appropriate beam currents. The chassis is capable of working in PAL. The sound system is capable of giving 2x8watts RMS Audio power output 8watt at 10% THD.

One four page simple TELETEXT, TOPTEXT, FASTEXT is provided. The chassis is equipped with 21-pin scart connectors can accept via scart the SVHS format from VCRs so equipped.

2. SMALL SIGNAL PART WITH TDA8362A :

The TDA8362A combines all small signal functions required for a colour TV receiver, except tuning.

2.1. Vision IF amplifier, video demodulator and identification circuit :
The vision IF amplifier consists of three AC-coupled differential stages. The gain control per stage is more than 20dB, which results in a total gain control of 64dB min. The IF amplifier inputs can be coupled directly to the SAW filter output. The input impedance is 2 Kohm in parallel with 3pF. The input sensitivity for on-set of AGC is 70μV (typ.), for IF frequencies between 38.9MHz and 58.75MHz. The reference carrier for the video demodulator is obtained via passive regeneration of the picture carrier. The reference tuned circuit is connected between pin 2 and 3. The IC can handle positive and negative modulated signals, the polarity of the modulation can be switched at pin 1. A transmitter identification circuit operates independently of the synchronization circuit, to allow separate use of the front-end section and the display section of the TDA8362A. The output voltage at pin4 will be high with transmitter identification and low without identification (sound muted).

2.2. AGC , tuner AGC and AFC :
The AGC detector operates at top-synch level for signals with negative modulation and at peak-white level for positive modulated signals. For positive modulated signals the AGC time constant is long to avoid visible variations of the video output signal. To obtain an acceptable AGC speed with positive modulation an extra circuit checks whether the AGC detector is activated every frame period. The speed will be increased if this circuit detects that the video output signal has not reached 80% of peak white level for approximately 100ms. Externally a diode (D201) takes care that the tuner AGC voltage can be reduced rather quickly, which is only required if positive modulated signals have to be processed. The tuner AGC take-over point can be set by adjusting the DC voltage at pin 49, with a potentiometer of 10Kohm (VR402). The tuner AGC (pin 47) is an open collector output stage with an output swing of 2mA min. The voltage swing, required by the tuner, can be obtained with an external resistive network, connected at pin 47. Pin 47 may rise 2V above the actual supply voltage, without damaging the IC. This feature is provided because most tuners require a 9V AGC voltage level for min gain. The AFC circuit is driven by the same reference signal as the video demodulator. A sample and hold circuit avoids video break-through from the video demodulator to the AFC voltage. The AFC output voltage range is from 0 to Vcc.

2.3. Sound circuit :
The sound carrier which is present at the video output pin 7 is fed via the sound bandpass to the sound input at pin 5. This pin has a double function; sound IF input (AC) and volume control (DC). The filtered intercarrier signal is fed to an amplifier / limiter circuit and is demodulated by a PLL demodulator. This PLL demodulator tunes automatically to the incoming frequency, hence no alignment is required. The AF signal (pin 50) has an amplitude of 350 mV_{rms} at maximum volume control setting. The volume control setting is between 0 and 5V, volume control is logarithmic. The deemphasis capacitor (C401) is connected externally at pin 1. The non-controlled audio signal (Peri-television) is also obtained from pin 1 via an amplifier stage (Q406). Audio input signal from an external source (SCART) with an amplitude up to 350m V_{rms} ($\pm$ 6dB) can be fed to pin6. The audio switch is controlled via the chroma input pin 16, as described in Chapter 8. The volume control operates upon the external audio input signal, when the TDA8362A is switched to the external mode.

2.4. Horizontal and vertical synchronization :
The incoming video signal, pin 13 for the internal signal and pin 15 for an external CVBS signal, is fed to the synchronization seperator circuit. Internally the black level and the top synch level are detected, next the synchronization pulses are amplified to a fixed level and sliced at 50% of that level. The separated synchronization pulses are fed to the first phase detector circuit and to the coincidence detector. The components which determine the loop gain of the first phase detector are connected at pin 40 (C422, C423 and R438). The coincidence detector is only used to detect whether the line oscillator is synchronised. When the IC is operating in internal mode, this information is fed to the ident pin as transmitter identification. The line oscillator is running at twice the line frequency and is derived from the X-tal oscillator frequency of the colour decoder, consequently no adjustment is required. The second phase detector generates the pulses for the horizontal driver stage (pin 37). The loop filter capacitor (C424) is connected at (pin 39). Horizontal shift can be obtained by a potentiometer (VR401), a series resistor (R440).

The TDA8362A has a separate start-up circuit for the horizontal oscillator (pin 36). The vertical drive pulses (pin 44) are generated by a divider circuit. The vertical ramp generator components are connected at pin 43. AC and DC feedback voltage from the vertical deflection stage must be connected at pin 42.

2.5. Integrated video filters :
The TDA8362A has an alignment-free internal chroma bandpas sand trap circuit. These filters are realised by means of gyrator circuit and they are tuned by tracking to the frequency of the X'tal controlled oscillator. The luminance delay is also realised by gyrator circuits. For SECAM an extra delay is built-in to adjust for the correct delay of the luminance signal.

2.6. Colour decoder :
The colour decoder contains an alignment-free X-tal oscillator, a dual killer circuit and the colour difference signals demodulators. The decoder adapts automatically for PAL and NTSC signals. Two X-tal pins are present so no external switching is required. With the SECAM add-on decoder TDA8395 an alignment free multi-standard decoder with automatic selection is built. The burst phase detector locks the X-tal oscillator with the burst signal.

2.7. RGB controller :
The colour difference signals are matrixed with the luminance signal to obtain RGB output signals (pin 18, 19 and 20). External RGB signals (pin 22, 23 and 24) coming from the Peri-television connector are interfaced by linear amplifiers. The contrast and brightness control and the peak white limiter operate on internal and external signals as well as RGB signals. The data insertion pin 21 has a second detection level at 4V. Above this level the RGB outputs are blanked. In this way OSD signals can be supplied directly to the inputs of the video output stages without any interaction to the RGB outputs of the colour decoder part of the TDA8362A. The output signal has an amplitude of about 2 V_{BL-WH} at nominal input signals and nominal control settings. The black current stabilisation is realized by means of a feedback from the video output amplifiers to the RGB output circuit. The black current of the three guns of the picture tube is internally measured and stabilised. The leakage current is measured during the first line and the following 3 lines, the 3 guns are adjusted to the required level. Maximum acceptable leakage current is $\pm 100\mu A$. The nominal value of the black current is $10\mu A$. The maximum current that can be supplied to the measuring input (pin 14) is $250\mu A$. The currents flowing into this pin will be higher during scan. For this reason, it is necessary that the excessive current is by-passed by means of an external clamping circuit. A resistor in series (R473) and a capacitor (C410) are connected to pin 14. The black current stabilisation circuit is not activated when the TV receiver is switched on and the RGB outputs are blanked; contrast, brightness control pins are short circuited. Only during the measuring lines, the output will supply a voltage of 5 V to the video output stage so that it can be detected whether the picture tube is warming up. When the current supplied to the measuring input (pin 14) exceeds $190\mu A$, the stabilisation circuit is activated and the contrast and brightness control pins are released. The switch-on behaviour of the picture is determined by the external time constant of the contrast control network.

2.8. Switches for external audio, CVBS and S-VHS signals :
The audio and CVBS switches are controlled via the chroma input pin 16, according to the following table :

Level pin 16	Int.CVBS	Ext.CVBS	Chroma	Chr.trap	Audio
DCV (INT.)	on	off	off	on	int.
3V S-VHS	off	on(Y)	on	off	ext.
DC7.5V (EXT.)	off	on(CVBS)	off	on	ext.

3. TUNER
Either a UHF-only TFK 3011 or a UHF/VHF 2000 KHC is used as tuner. The frequency range is

SYSTEM	C.C.I.R	
Channels	off-air	cable
VHF - LOW	51MHz to 65MHz	S1 to S6
VHF - HIGH	178MHz to 227MHz	S7 to S41
UHF	474MHz to 858MHz	-

The tuner has a voltage gain of approximately 40dB with a gain reduction capability of typically 40dB for band 1 and 3 and a minimum AGC of 30dB for band 4 and 5. It has a noise figure of typically 7dB for band 1 and 3, 8dB for band 4 and 9dB for band 5.

4. SECAM DECODER TDA8395 (FOR MODELS WITH SECAM SYSTEM ONLY)

The SECAM decoder TDA8395 which is used in conjunction with the TDA8362A includes the Cloche filter, demodulator and identification circuit. The resonance frequency of the Cloche filter is controlled during the calibration period and offset during scan for the right resonance frequency. The required reference frequency for calibration is connected at pin 1 and is obtained from the TDA8362A (pin 32). The two-level sandcastle pulse has to be connected at pin 15 (TDA8362A pin38) and is used for generation of the blanking periods and provides clock information for the identification circuit.

The chroma signal at pin 16 connected to pin 27 of the TDA8362A, is demodulated by a PLL demodulator, which uses the reference frequency and a band gap reference to force the PLL to the desired demodulation characteristic.

5. BASEBAND DELAY LINE TDA4661

The TDA4661 are integrated base band delay lines of 64uS for colour TV receivers. It is connected to the TDA8362A and TDA8395 without the need of switches and alignments. The TDA4661 consists of two main blocks:

- Two comb filters with a delay time of 64uS.
- Internal clock generation of 3MHz, line locked via the sandcastle pulse.

The TDA4661 operates according to the mode demanded by the colour transmission standard.In the PAL mode it operates as a geometric adder to satisfy the requirements of PAL demodulation and in the SECAM mode the delay line repeates the colour difference signal on consecutive horizontal scan lines.

6. VERTICAL OUTPUT STAGE WITH TDA3654

The TDA3654 is a vertical deflection output circuit for drive of various deflection systems with currents up to $3A_{p\text{-}p}$. The output pin is pin 5. The output power transistors are protected by the cooperation of thermal protection circuit, the current-voltage detector, the short-circuit protection and the special measures in the internal circuit layout. Pin 1 is the input for the driver of the output stage. The signal at pin 1 is also applied via external resistors to pin 3 which is the input of a switching circuit. When the flyback starts, this switching circuit rapidly turns off the lower output stage and so limits the turn-off dissipation. The amplitude of the flyback voltage which is present at pin 8 is determined by the value of the external resistor at pin 8. When there is no deflection current and the flyback generator is not activated, the voltage at pin 8 reduces to less than 1V. The guard circuit will then produce a DC voltage at pin 7, which can be used to blank the picture tube and thus prevent screen damage. The internal voltage stabilizer provides a stabilized supply of 6V to drive the output stage, which prevents the drive current of the output stage being affected by supply voltage variations.

7. HORIZONTAL DEFLECTION STAGE

The horizontal drive pulses, from pin 37 of the TDA8362A, are connected to base of driver transformer Q601 via resistor R439. The base current of the driver transistor is supplied via R601 (pin 37 is an open-collector output). The driver transformer (TR601) drives the BU506D deflection transistor (Q602). TR602 is the EHT transformer. The 112V supply voltage for the transformer is connected at pin 3. TR602 generates the EHT-, focus- and G2- voltage, required by the picture tube. Furthermore the 200V supply and heater voltages are derived from this transformer. The beam current information from pin 7 of TR602 is used for reducing the contrast at too high beam currents, for stabilizing the voltages derived from the power supply and for stabilization of the vertical amplitude. The flyback voltage is AC-coupled and clipped between +8V and ground by diodes D601 and D602 to obtain a well-shaped flyback pulse for feedback to the TDA8362A (pin 38).

8. EAST - WEST CORRECTION STAGE WITH TDA8145

A differential amplifier OP1 (OP2) is driven by a vertical frequency sawtooth current of $\pm 33\mu A$ which is produced via an external resistor from the sawtooth voltage. The non-inverting input of this amplifier (PIN 1) is connected with a reference voltage corresponding to the DC level of the sawtooth voltage. This DC voltage should be adjustable for the keystone correction. The rectified output current of this amplifier drives the parabola network which provides a parabolic output arrent.

This output current produces the correspanding voltage due to the voltage drop across the external resistor at PIN 7.

If the input is overmodulated ($>40\mu A$), the internal current is limited to $40\mu A$. This limitation can be used for suppressing the parasitic parabolic current generated during the flyback time of the frame sawtoth.

A comparator OP2 is driven by the parabolic current. The second input of the comparator (PIN 8) is connected with a horizontal frequency sawtooth voltage the DC level of which can be changed by the external circuitry for the adjustment of picture with.

The horizontal frequency pulse-width modulated output signal drives the final stage. It consists of a class DC pulse-pull output amplifier that drives, via an external inductor, the diode modulator.

9. SOUND OUTPUT STAGE TDA2611A

TDA2611A is used as the AF output amplifier. It is supplied by +24V coming from a separate winding in the SMPS transformer. Pin 50 of the TDA8362 is AC-coupled to the input pin 7 of the TDA2611A via a resistor divider. Maximum audio output power for 1 KHz signal with 30% modulation is 1.5W.

10. MICROCONTROLLER (CTV351S, CTV551S)

A. CTV351S is a TV receiver control system using all the functions of a PCA84C841 microcontroller. The system has Voltage Synthesis Tuning (VST). Sound and picture are controlled by the five DACs of the PCA84C841. The system is independent of the TV transmission standards. Control of a four-page teletext decoder is an option in the basic system. A 2K memory which allows 90 programmes to be stored is used (IC502).

CTV351S has the following features:

- Voltage synthesis tuning via a 14-bit DAC
- On-screen display
- Control of two transmission standards
- Direct control of four-page teletext decoder
- Full peri-TV switching
- German stereo and/or Nicam or mono-only soun control

B. CTV551S is a TV receiver control system using all the functions of a P83C055 microcontroller. The system has Voltage Synthesis Tuning (VST). Sound and picture are controlled by the five DACs of the P83C055. The system is independent of the TV transmission standards. Control of a four-page teletext decoder is an option in the basic system. A 4K memory which allows 100 programmes to be stored is used (IC502).

CTV551S has the following features:

- Voltage synthesis tuning via a 14-bit DAC
- On-screen display
- Control of two transmission standards
- Direct control of four-page teletext decoder
- Full peri-TV switching
- German stereo and/or Nicam or mono-only soun control
- Menu operating

10. POWER SUPPLY (SMPS)

The DC voltages required at various parts of the chassis are provided by an SMPS transformer controlled by the IC TDA4605-2 which is designed for driving, controlling and protecting the switching transistor BUZ90 of SMPS. This transformer produces 150V for FBT input, 33V for tuning circuitry of microcontroller, 26V for audio output, 26V for vertical output (field scan) and 16V which is converted to a regulated +12V for tuner and some other ICs and transistors. This 12V is also used to obtain 8V by means of the regulator LM7808 for TDA8362A and some other ICs and transistors and 5V by means of regulator for teletext and sound circuitry. 5V is obfained from 16V out for controller.

11. CRT BASEBOARD

When RGB signals enter the input of the video amplifier stage (CRT baseboard), they are amplified by means of three symmetrical class-B type video amplifier stages. For this purpose, three BF869S high-voltage, video output power transistors are used. So, high gain-bandwidth product is achieved Furthermore, voltage changes at the outputs of amplifiers caused by temperature variations are compensated by means of an additional circuitry. Black current information (BCI) is send to TDA8362A (Refer to TDA8362A RGB).

12. TELETEXT STAGE

There are four teletext options:

- Simple text (1 page) using SAA5254P/T
- Simple text (4 page) using SAA5246 + 8K8 RAM
- FASTEXT (4 page) using SAA5246 + 8K8 RAM + PCF84C81
- TOPTEXT using CTV990

SPECIFICATIONS

POWER SUPPLIESA

NOMINAL : 220 - 240V AC 50Hz.

The chassis is fully mains isolated and is stabilized across mains voltage rangefrom 175V to 265V for less than 0.75 % change in picture size. No mains input adjustment is required.

POWER CONSUMPTION

Typlcally : MAXIMUM : 120W
MINIMUM : 130W

FREQUENCY COVERAGE

Hyperband (VHF CH 2 to UHF CH 69 includìng CATV) : 47 - 862 MHz

UHF (CH 21-69) : 471 - 862 MHz

SENSITIVITY

34 dBμV or less for any channel wìth a locked colour picture

MAXIMUM SIGNAL INPUT

95 dBμV or more for any channel

IF FREQUENCIES (in MHz)

	VISION	SOUND
B/G (EUROPE) :	38.9	33.4
I (UK) :	39.5	33.5
L' (FRANCE) :	32.7	39.2
L (FRANCE) :	39.2	32.7
D/K (RUSSIA) :	38.0	31.5

AUDIO OUTPUT

MAXIMUM : 2x8W RMS
(Audio power output 8watt at 10% THD)

BEAM CURRENT LIMITING

1300μA

EHT

MAXIMUM : 27KV

SERVICING ADJUSTMENTS AND ALIGNMENTS

The following preset adjustment procedures are not required during installation and should be made, if necessary, after servicing.

WARNING

EHT SHOCK HAZARD :

The EHT must be safely discharged before attemping to disconnect the EHT lead from the tube anode.

Clip one end of a convenient lead, such as a meter lead, to the tube earthing strap on the tube body, fold back the suction cap and discharge the EHT through the lead. Press in one side of the spring clip which protects into the tube cavity to ease removal of the EHT connector.

IMPORTANT

Do not disturb the tube neck adjustments as these have been set for optimum performance during the tube manufacture.

Before attemping the following adjustments, the receiver should be tuned with the brightness, contrast and colour controls adjusted for the best picture and all measurements are to be made after a warm-up period of approximately 5 minutes, unless stated otherwise.
- 60 dBmV signal at any channel frequency
- Color bar pattern and 1KHz sound signal
- Mains 220-240V AC, 50Hz

The adjustments should be carried out in the following order for convenience.

SMPS SYSTEM VOLTAGE

1) Set the BCS (Brightness, Contrast, Saturation) and VOL (Volume) to minimum.
2) Check the voltage at the shorted pins of socket PL602 (TP1)
3) If necessary, adjust VR801 150 $\pm$ 0.5V_{DC}
4) Set the BCS and VOL to normal picture and sound.

VISION DEMODULATOR AND AFC

1) Set the pattern generator for 10μV, 38.9 MHz (B/G models) or 39.5 MHz (for I models) or 38.0 MHz (for D/K models) RF output
2) Connect the RF output of the pattern generator to any one input of SAW filter and connect the other input of SAW filter to ground through 10nF capacitor (No antenna input applied)
3) Check the voltage at the base of Q201 (TP2)
4) Adjust the VR401 3.5 $\pm$ 0.1 V_{DC} (M4)
5) After the adjustment procedure, please disconnect all external connections.

2) PICTURE GEOMETRY AND FOCUS

1) Set the pattern generator for centre-cross, circle and cross-hatch composite pattern.
2) VR702 : Adjustment of vertical size,
   VR701 : Adjustment of vertical linearity,
   VR703 : Adjustment of vertical shift,
   VR652 : Adjustment of horizontal width,
   VR650 : Adjustment of pincushion correction,
   VR401 : Adjustment of horizontal centering,
   and focus potentiometer (on EHT transformer) for optimum focusing.

TUNER AGC

1) Check the voltage at pin 1of TUNER (TP4)
2) Adjust the VR402 to get 1V voltage at 4M by decreasing the amplitude of the signal from maximum to desired value.

SCREEN VOLTAGE

1) Set the pattern generator for grey scale.
2) Set the BCS (Brightness, Contrast, Saturation) to minumum.
3) Measure cathode voltages on the CRT base board by using a 1/1000 probe.
4) Adjust screen pot of FBT for 175 ± 2V reading on maximum cathode voltage.

CRT BASEBOARD
CUT-OFF VOLTAGES AND WHITE BALANCE

1) Set the pattern generator for grey scale.
2) Use 1/1000 prob to measure the voltage at green cathode.
   Adjust the voltage obsened at this cathode by the screen potentiometer
   (on EHT transformer) ssss that the voltage will be 10V less than its maximum value.
3) Display the white patern on screen and set all analog controls to its minumum value.
4) You can adjust the white balance by the colour analyzer. Place the prolse of the colour analyzer to the centre of the screen and adjust the potentiometers VR951 & VR953 to get X = 285 ± 1V and Y = 293 ± 1V value on analyzer.

TDA8362A

MONOLYTHIC INTEGRATED PAL / NTSC TV PROCESSOR

GENERAL DESCRIPTION : The TDA8362A is nearly identical to the TDA8362. The main difference between the 2 devices is that the TDA8362A contains a black-current stabilisation circuit. Because of the required input pin for the black-current stabilisation circuit the luminance peaking function has been omitted in the TDA8362A. All other functions of the 2 IC's are identical.

FEATURES :

- Multi-standard vision IF amplifier suitable for negative and positive modulation.
- Multi-standard FM sound demodulator (4.5MHz to 6.5MHz).
- Source selection for external A/V inputs (seperate Y/C signals can also be applied).
- Integrated chroma trap and bandpass filters (autocalibrated).
- Luminance delay line integrated.
- Alignment-free PAL/NTSC decoder with automatic search system.
- Easy interfacing with the TDA8395 (SECAM decoder) for multi-standard applications.
- RGB-control circuit with linear RGB inputs and fast blanking.
- Black-current stabilisation circuit.
- Horizontal synchronisation with two control loops and alignment-free horizontal oscillator without external components.
- Vertical count-down circuit (50/60Hz) and vertical preamplifier.
- Low dissipation (only 700mW).
- Only one adjustment (vision IF demodulator).

PINNING	PIN VOLTAGE
1- Audio deemphasis and +/- mod. switch	3V
2- IF-demodulator tuned circuit	6V
3- IF-demodulator tuned circuit	6V
4- Video indentification output	5V
5- Sound IF plus volume control	0.5V - 4V
6- External audio input	4V
7- IF video output	3.25V
8- Decoupling digital supply	1.8V
9- AFC output	-
10- Positive supply (8V)	8V
11- Ground	-
12- Decoupling filter tuning	3.25V
13- Internal CVBS input	4.25V
14- Black-current input	4V
15- External CVBS input	3.5V
16- Chroma + A/V switch input	0V (TV) - 8V (AV)
17- Brightness control input	1V - 3.5V
18- B-output	2.5V - 3.5V
19- G-output	2.5V - 3.5V
20- R-output	2.5V - 3.5V
21- RGB-insertion and blanking	-
22- R-input for insertion	3.3V
23- G-input for insertion	3.3V
24- B-input for insertion	3.3V
25- Contrast control input	0V - 3V
26- Saturation control input	0V - 3V
27- Hue control input (or chroma out)	6V
28- B-Y input signal	4V
29- R-Y input signal	4V
30- R-Y output signal	1.5V
31- B-Y output signal	1.5V
32- 4.43MHz output for TDA8395	1.6V (PAL) 4.5V (SECAM)
33- Loop filter burst phase detector	4.5V
34- 3.58MHz X-tal connrection	3V
35- 4.43MHz X-tal connection	2V
36- Start horizontal oscillator	8V

37- Horizontal output ..... : 0.6Vp-p 15.6 KHz

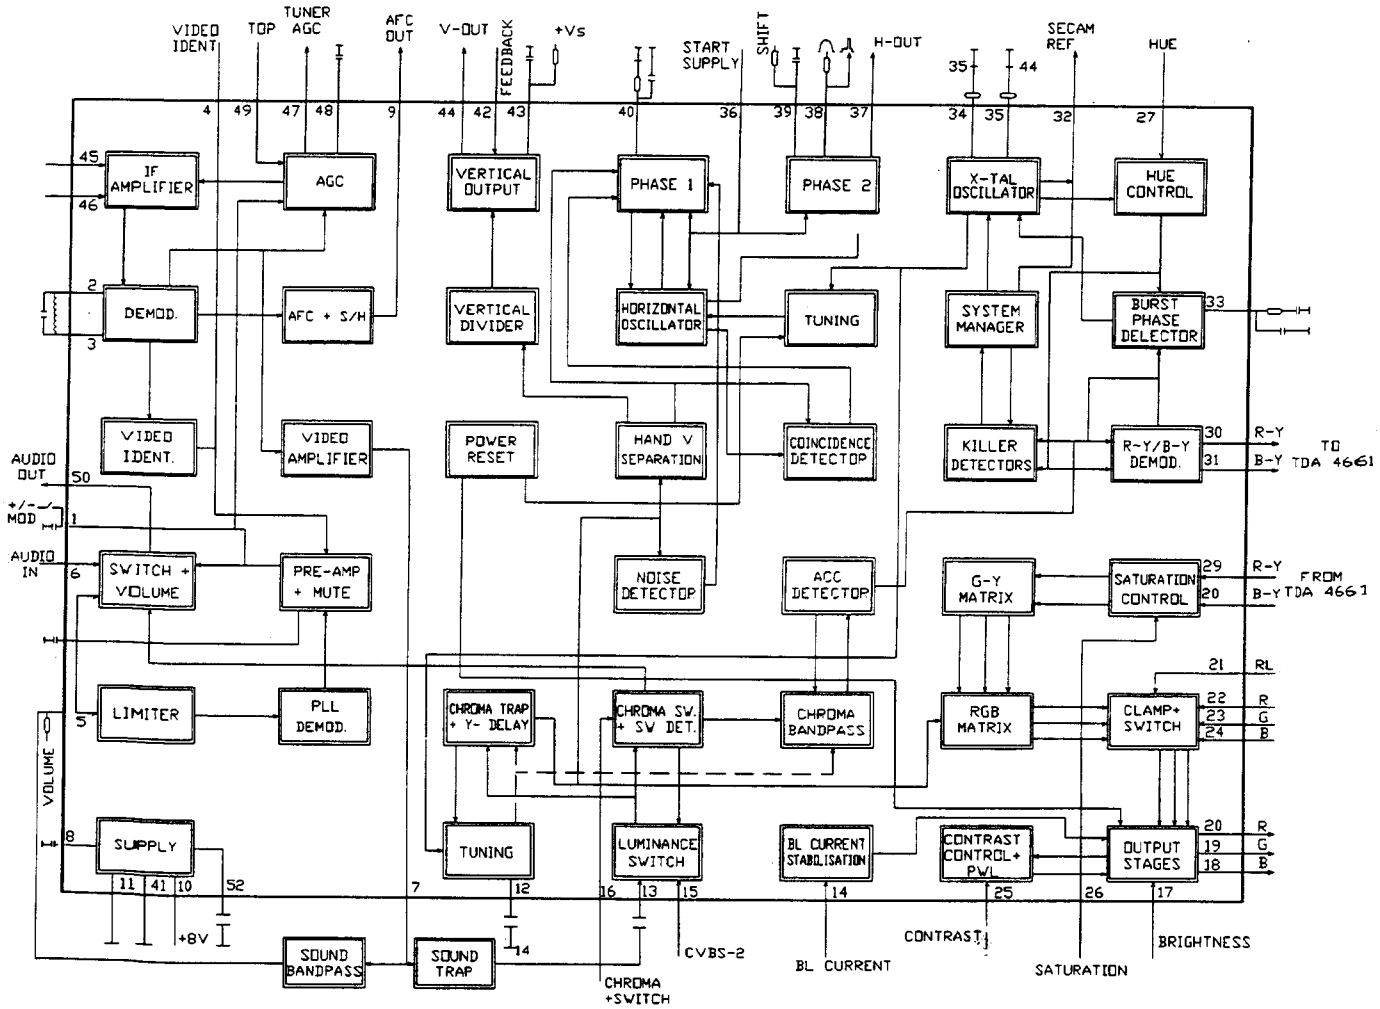
48- AGC decoupling capacitor ..... : 4V
49- Tuner take-over adjustment ..... : -
50- Audio output ..... : 3.4V
51- Decoupling sound demodulator ..... : 4.5V
52- Decoupling bandgap supply ..... : 6.5V



BLOCK DIAGRAM OF TDA8362A

TDA4661

64 micro-second BASEBAND DELAY LINE

GENERAL DESCRIPTION: The TDA4661 is an integrated baseband delay line circuit. It provides a delay of 64μs for the colour difference signals. (R-Y) and (B-Y), in multi-standard TVs.
The colour difference signals are AC-coupled to pins 16 to 14 respectively and clamped at the input stages. The signals are then fed via buffers to the delay line circuit. The delay line circuit is driven by a 3MHz internal clock which enables the circuit to produce the required delay of 64μs.
The outputs from the delay line circuit are fed through sample-and-hold and low-pass filters to suppress the clock signal. The delayed and non-delayed are then added and fed to the output pins, 11 and 12, via buffers.
The internal clock is derived from a 6MHz voltage controlled oscillator (VCO) which is line-locked via a PLL to the sandcastle pulse at pin 5.

FEATURES :

- Two comp filters using the switched-capacitor technique and with delay time of 64μs.
- Generation of a 3MHz internal clock that is line-locked via the sandcastle pulse.

TDA3654

VERTICAL DEFLECTION AND GUARD CIRCUIT (110°)

GENERAL DESCRIPTION: The TDA3654 is a ful performance vertical deflection output circuit for direct drive of the deflection coils and can be used for a wide range 90° and 110° deflection systems. A guard circuit is provided which blanks the picture tube screen in the absence of deflection current.

FEATURES:

- Direct drive to the deflection coils
- 90° and 110° deflection system
- Internal blanking guard circuit
- Internal voltage stabilizer

PINNING	PIN VOLTAGE
1. Output Stage Driver Input	2.2V
2. Ground	-

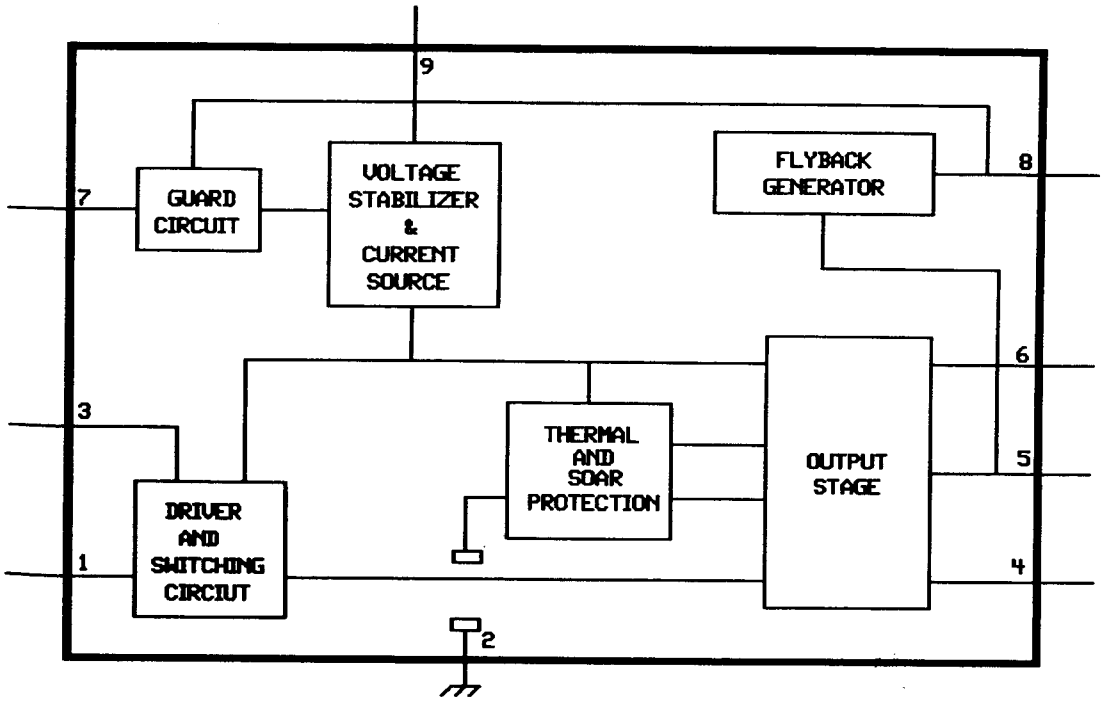
7. DC Voltage produced by the Guard Circuit	5.2V
8. Flyback Generator Output	6V
9. Supply Voltage	26V



BLOCK DIAGRAM OF TDA3654

TDA4605-2

SWITCH MODE POWER SUPPLY CONTROLLER

GENERAL DESCRIPTION: The TDA4605-2 is an integrated circuit designeted to regulate and control the power mosfet of a a switching power supply. Because of its wide operational range and high voltage stability even at high load changes, this IC can be used not only in TV receivers and video recorders but also in power supplies. HI-FI set and active speakers.

FEATURES:

- Fold-back characteristics provides overload protection for external components.
- Burst operation under secondary short-circuit condition implemented.
- Protection against open or a short of the control loop.
- Switch-off line voltage is too low (undervoltage switch-off).
- Line voltage depending compensation of foldback point.
- Soft-start for quite start-up without noise generated by the trasformer.
- Chip over-temperature protection (thermal shutdown).
- On-chip ringing suppression circuit against parasitic oscillations of the transformer.

ST24C02

2K CMOS Serial Electrically Erasable PROM

GENERAL DESCRIPTION: The 24LC02B is 2K bit Electrically Erasable PROM. The device is organized as a single block of 128x8-bit or 256x3-bit memory with a two wire serial interface. Low voltage design permits operation down to 2.5 volts with a standby and active currents of only 5mA and 1mA respectively. The 24LC02B also has page-write capability for up to 8 bytes of data.

FEATURES :

- Single supply with operation down to 2.5 Volts
- Low power CMOS technology
  - 1mA active current typical
  - 10mA standby current typical at 5.5V
  - 5mA standby current typical at 3.0V
- Organized as a single block of 128 bytes (128x8) or 256 bytes (256x8)
- Two wire serial interface bus
- 100KHz and 400KHz compatibllity
- Self-timed write cycle (including auto-erase)
- Page-write buffer for up to 8 bytes
- 2μs typical write cycle time for page-write
- Hardware write protect for entire memory
- Can be operated as a serial ROM
- Factory programming (OTP) available
- ESD protection > 4.000V
- 1.000.000 ERASE/WRITE cycles (typical)
- Data retention > 40 years
- 8-pin DIP or SOIC package
- Available for extended temperature ranges
  - Commercial : 0'C to + 70'C
  - Industrial : -40'C to + 85'C

ST24C04

4K-Bit Serial E^2PROM

GENERAL DESCRIPTION:

The CAT24C04/CAT24C04I is a 4K bit Serial CMOS E^2PROM internally organized as 512x8 bits. Catalyst's advanced CMOS tecnology substantially reduces device power requirements. The CAT24C04/CAT24C04I features a 16 byte page write buffer. The device operates via the I^2C bus serial interface and is available in 8 pin DIP, 8 pin SO and 14 pin SO packages.

FEATURES :

- I^2C bus compatible
- Low power CMOS technology
- 16 byte page write buffer
- Self-Timed Write Cycle with Auto-Clear
- 100.000 Program/Erase Cycles
- 100 year data retention
- 8 pin DIP, 8 pin SO or 14 pin SO package
- Optional High Endurance Device Available

BLOCK DIAGRAN OF ST24C04

FCB61C65

8K x 8 FAST CMOS LOW - POWER STATIC RAM

GENERAL DESCRIPTION: The FCB61C65 is a 65536-bit fast, low-power, static random access memory organized as 8192 words of 8 bits each. The chip enable inputs CE1 and CE2 are available for memory expansion and to control the low-power / stand-by mode. The device operates from a 5 V power supply and has an access time of 55 ns and 70 ns. The FCB61C65 is ideally suited for memory applications where fast access time, low power and ease of use are required. The FCB61C65 is a CMOS device which uses a 6 transistor memory cell.

FEATURES:

- Operating supply voltage
- Inputs and outputs ESD protected
- Automatic power-down after a completed read access
- Access time: 55 ns and 70 ns
- Low current consumption:
- Suitable for battery back-up
- Latched data outputs giving stable data between consecutive accesses
- Easy memory expansion
- Common data I/O interface
- All inputs and outputs TTL and CMOS compatible
- All inputs have a Schmitt trigger switching action
- Three-state outputs
- Operating temperature 0 °C to +70 °C

PCA84C841

MICROCONTROLLERS FOR CTV 351S

GENERAL DESCRIPTION: CTV351S is a low cost television receiver control system, based on the PCA84C841 microcontroller. It is a voltage synthesis tuning (VST) system with on-screen-display (OSD) of all relevant control function. Analogue picture settings are controled by 4 on-clip digital to analogue convertors. Sound volume can be controlled by the fifty on-chip digital to analogue convertor in a mono-only system. Full sound (Volume, Bass, Trable, Balance) can be controlled via the I^2C-bus in a German Stereo and/or Nicam configuration, using a Hi-Fi sound audio processor.
CTV351S can control up to two SCART plugs and an S-VHS plug.
The system is colour standard independent and can be used all over the world. It can select 3 system (PAL, SECAM and NTSC) and has additional options for sound systemsn.
The system fulfils numerous and varied requirements and has options to make it applicable to all markers.
The PCA84C841 is a member of the MAB8400/PCF84C00 microcontroller family. It is a one-chip microcontroller with an 8-bit CPU, 8K ROM, 192 bytes RAM, 8-bit timer/event counter and single level, 3-source interrupt structure. It is mounted in a 42 pin shrunk DIL package. Manufactured in CMOS technology and operating from a single supply voltage between 3.5V and 5.5V, it runs at a oscillation frequencies up to 10MHz and contains about 80 single and double byte and cycle instruction. Up to 17 general purpose bidiractional I/O lines and 11 I/O lines with a combained function are available. One 8-bit I/O port can sink up to 10mA and can therefore be used to drive directly a LED display.

FEATURES :

TUNING;

- Voltage synthesis tuning system via 14 bits digital to analogue convertor.
- Automatic search tuning based on analogue AFC signal and on IDENT (Video recognition) signal.
- Tuning in up to 4 different bands.
- Manual search tuning.
- Direct program number entry.
- One and two program number entry.
- Step program up and down.
- Last-tuned programme registration and swap function.
- Silent tuning.
- Dark program switching.
- Automatic following per program.

CONTROL;

- Up to 28 local control commands.
- Remote control according the RC-5 world standart.

DISPLAY;

Off-screen LED display of stand-by mode.

On-screen display of :

- Menu operations.
- Remote control command reception.
- Selected source (Programme, AV-1, AV-2, GRB, AV-S).
- Selected sound mode (MONO, DUAL-I, DUAL-II, STEREO).
- One or two digit programme number entry. (-/--).
- Selected tuner band VHF-1, VHF-3, UHF and VHF-Hyper.
- Selected system (SYS-1, SYS-2).
- Analogue tuning bar in search mode.
- Store and clear programme mode.
- Sound mute.
- Analogue control; recall, store and clear preferred settings.
- Analogue control of; volume, brightness, coluor, contrast, hue, balance, trable, bass.
- Analogue control status bars.
- Selected sleep timer.

SOUND ;

- Volume control.
- Optional balance, treble and bass control.
- Mute control function.
- Automatic sound muting during tuning.
- Automatic sound muting during program switching.
- Optional German Stereo sound decoding.
- Optional Nicam Sound decoding

VIDEO ;

- Control of brightness, colour, contrast and hue in 64 steps (8 steps/second).
- System standart control of two different standards.
- Additional three button control possibility for all analogue colour and sound controls.

PERI-TV ;

- Peripheral Tv plug signal switching. Two SCART plugs and S-VHS plugs are supported. Up to four peri sources can be selected (CVBS on SCART-1, RGB on SCART-1, CVBS on SCART-II and S-VHS). For all peri sources full sound switching is optionally available.
  Automatic switching to CVBS on SCART-I. Any source (Peripheral or front-end) except CVBS on SCART-I can be overruled by auto cvbs switching.

MEMORY ;

- Storage of 40 or 90 preferred programmes.
- Storage of 14 bit tuning DAC value, band select, system standard, dual language preference and automatic following enable control bits for each programme.
- Storage of preferred analogue picture and sound control settings.
- Storage of system standard and sound mode selection for for peripheral audio/video sources.

OPTIONS ;

- Theree band, four band or UHF-only tuner.
- Different tuner and AFC characteristics.
- Peripheral audio/video TV plug control.
- System control.
- German Stereo and/or Nicam or mono-only sound control.
- 40 or 90 pre-programmed preferred channels. (128 or 256 bytes of NV-memory).
- One page, four page or high performance teletext.
- OSD text or symbolds with or without background.
- Remote fine tuning.
- Analogue control of hue.
- Remote control commands search, store, fine tuning and system standard select anabled or disabled.

POWER-ON ;

- Main switch sense input to check whether TV has to be switched-on or to standby mode.
- The program provides a fixed delay of 1.2 seconds and screen blanking about 100msec to allow the switch-mode power-supply to stabilize.
- After power-on reset of the microcontroller and first time switching-on of the set, the system tunes to the first available valid programme and recalls analogue picture and sound control presets from non-volatile memory. If all programmes are "cleared" the programme number is forced to 1 anyway.

STANDBY ;

- Standby command.
- Sleep timer expiration after 15, 30, 45, ... up to 120 minutes.
- Automatic switching to standby mode when the system is in front-end mode and during the last 5 munites no valid input signal is received or no valid remote or local control command is detected.
- Switching on witout the third momentary contact on the mains switch.

PRODUCTION SERVICE MODE :

- CTV351S is equipped with a special Production Servive Mode, in order to prevent the set from switching of after 5 minutes if no IDENT is present. This mode is veryuseful during factory burn-in trsts..

TELETEXT (These functions only for CTV351S) :

- Either: a single page teletext control system by means of SAA5254. All normal teletext function are available. A special signal for de-interlace purposes is available on the odd/even output of the SAA5244.
- Or : a 4 page teletext control system with SAA5246 and an 8k8 SRAM. All normal teletext functions are available. A special signal for de-interlalce purposes is available on the odd/even pin of the SAA5246.
- Or : Control of additional special teletext features like FASTEXT, TOP, LIST, packet X/26 (for Spain and Eastern Europe), using a second microcontroller containing a teletext software package CTV97xS or CTV99xS.

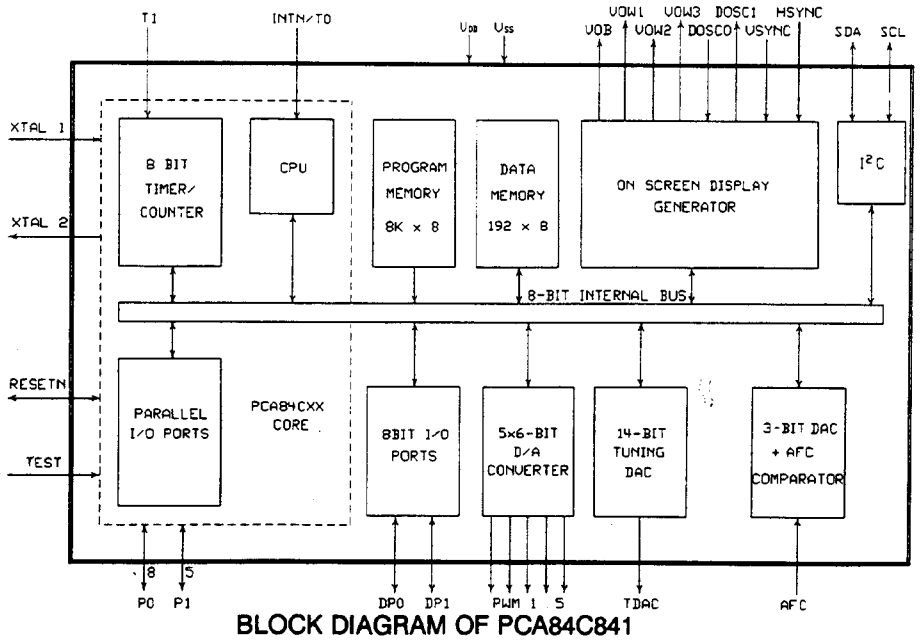
42- +5V supply voltage input	: 5V



BLOCK DIAGRAM OF PCA84C841

P83C055

MICROCONTROLLERS FOR CTV 551S VE1

The P83C055 is a derivative of Philips' industry-standard 80C51 microcontroller that is intended for use as the central control mechanism in a television receiver or tuner. The OTP-type is P87C055. It is a one-chip microcontroller with an 8-bit CPU, 16K ROM, 256 bytes RAM and two 8-bit timer/event counters. It is mounted in a 42 pin shrung DIP package. Manufactured in CMOS technology and operating from a single supply voltage between 4.5V and 5.5V, it rung at a 12MHz oscillation frequency and contains about 80 single and double byte and cycle instructions. Up to 15 general purpose bidirectional I/O lines and 9 I/O lines with a combined function are available. One 8-bit I/O port can sink up to 10mA and can therefore be be used to drive directly a LED display.
The circuit contains an external interrupt input which can be used to decode the serial remote control data. The internal 14-bit timer is used as a timing reference for the remote control decoding, scanning of the local keyboard and general system timing in general.

FEATURES :

TUNING;

- Voltage synthesis tuning system via a 14 bit digital to analog converter
- Automatic search tuning up and down based on analog AFC singnal and on IDENT (video recognition) signal
- Tuning in up to 4 different bands
- Manual search tuning
- Direct program number entry
- One and two digits program number entry
- Step program up and down
- Last-tuned program registration and swap function
- Silent tuning
- Dark program switching
- Program lock and TV lock with three digits password
- Automatic following per program

CONTROL ;

- Up to 28 local control commands
- Remote control according to the RC-5 world standard
- Menu controlled User Interface

DISPLAY ;

Off-screen LED display of Standby mode.
On screen display of (OSD) :

- Menu operations
- Remote control command reception
- Two digit program number entry
- Selected tuner band VHF-1, VHF-3, and UHF-Hyper
- Analog tuning bar in search mode
- Selected source (Program, AV-1, AV-2, RGB, AV-S)
- Store program mode
- Selected sound mode (MONO, DUAL-I, DUAL-II, STEREO)
- Selected colour standard mode
- Sound mute
- Selected sleep timer
- No ident timer
- Locked program status
- Message up to 30 charracters
- Analog control; recall and store preferred settings
- Analog control mod : Brightness, colour, contrast hue, volume, balance, treble and bass
- Decimal analog control value and status bar for every selected analog control

SOUND ;
- Volume control in 64 steps (8 steps/second)
- Optional balance, treble and bass control
- Mute control function
- Automatic sound muting during tuning
- Automatic sound muting during program switching
- Automatic sound recall for first 40 programs and external sources
- Optional German Stereo sound decoding
- Optional Nicam sound decoding

VIDEO ;
- Control of brightness, colour contrast and hue in 64 steps (8 steps/second)
- Colour standard control of two different standards

PERI-TV ;
- Peripheral TV plug signal switching. Two SCART plugs and S-VHS plug are supported. Up to four peri sources can be selected (CVBS on SCART-I, CVBS on SCART-II, RGB on SCART-I and S-VHS). For all peri sources full sound switching is optionally available. Automatic switching to CVBS on SCART-I. Any source (peripheral or front-end) except CVBS on SCART-I can be overruled by auto cvbs switching.

MEMORY ;
- Storage of 100 preferred programs
- Storage of 14 bit tuning DAC value, band select, system standard, dual language preference and following enable control bits for each program
- Storage of preferred analog picture and sound control settings
- Storage of preferred volume value only for first 40 programs (programs 0....39) and external sources

OPTIONS ;
- Three-band, four-band or UHF-only tuner
- Different tuner and AFC characteristics
- Peripheral audio/video TV plug control
- System control
- German stereo and/or Nicam or mono-only sound control
- Four or three language selection for OSD
- One page or four page teletext
- Analog control of hue

POWER ON ;
- The program provides a fixed delay of 1.2 seconds and screen blanking of about 100msec to allow the switch-mode power supply to stabilize.
- After power-on reset of the microcontroller and first time switching-on of the set, system tunes to program 1 and recalls analog picture and sound control presets from non-valatile memory.

STAND-BY ;
- Sleep timer selection of 15, 30, 45, ..., up to 120 minutes.
- Automatic switching to standby mode when the system is in front-end mode and during the last 5 minutes no valid input signal is received or no valid remote or local control command is detected. (All complete received commands with system address 0, TV commands will restart the 5 minute timer. All these commands will also result in an OSD message).

TELETEXT :
The following teletext options are possible :
- A single page teletext control system with SAA5254.
- A 4-page teletext control system with SAA5246AP/T and an 8K8 SRAM.
- A 4-page teletext control system with SAA5281.
- Control of the special teletext feature TOP / FASTEXT using a second microcontroller containing new software package CTV988S and teletext decoder SAA5281.

LA7910

TV TUNER BAND SELECTOR

GENERAL DESCRIPTION: The LA7910 is an IC for tuner band selection of electronic tuning type television set. This IC is used for producing the VHF channel "L" band power supply, VHF channel "H" band power supply, UHF channel power supply for tuner and the CAPT power supply according to the band select signal of 2 inputs.

FUNCTIONS :

- VHF "L" band power supply output
- VHF "H" band power supply output
- UHF power supply output
- CATV power supply output

FEATURES

- 2 inputs and 4 outputs
- Low output saturation voltage : 0.25V typ., $I_O = 60mA$
- Compact 9-pin single-end package

PINNING

	PIN VOLTAGE			
	WHF-L	VHF-H	UHF	CATV

TDA8145

TV EAST/WEST CORRECTION CIRCUIT FOR SQUARE TUBES

GENERAL DESCRIPTION: The TDA8145 is a monolithic integrated circuit in a 8-pin minidip plastic package designet for use in the square CTR east-west, pincushion correction by driving a diode modulator in TV and monitor applications.

FEATURES :

- Low dissipation
- Square generator for parabolic current specially designed for square CRT correction
- External keystone adjustment (symmetry of the parabola)
- Input for dynamic field correction (beam current change)
- Static pictura width adjustment
- Pulse - Width modulator
- Final stage D-class with energy redelivery
- Plastic parabola suppression, during flyback time of the sawtooth

TDA8395

SECAM DECODER

GENERAL DESCRIPTION: The TDA8395 is a self-calibrating, fully integrated SECAM decoder. It should preferably be applicated in combination with the PAL/NTSC decoder TDA8362 or TDA8366 and with the switched capacitor baseband delay TDA4661. It includes HF- and HF-filters, demodulator and identification. Luminance is not processed in this circuit. It needs no adjustments and very few external components. It needs very highly accurate reference frequency for calibration and a two-level sand-castle for blanking and burstgating.

FEATURES :

- Fully integrated filters
- Alignment free
- For use with baseband delay

PINNING	PIN VOLTAGE
1- Frequency referance	: 1.6V (PAL) 4.5V (SECAM)

TDA1521A

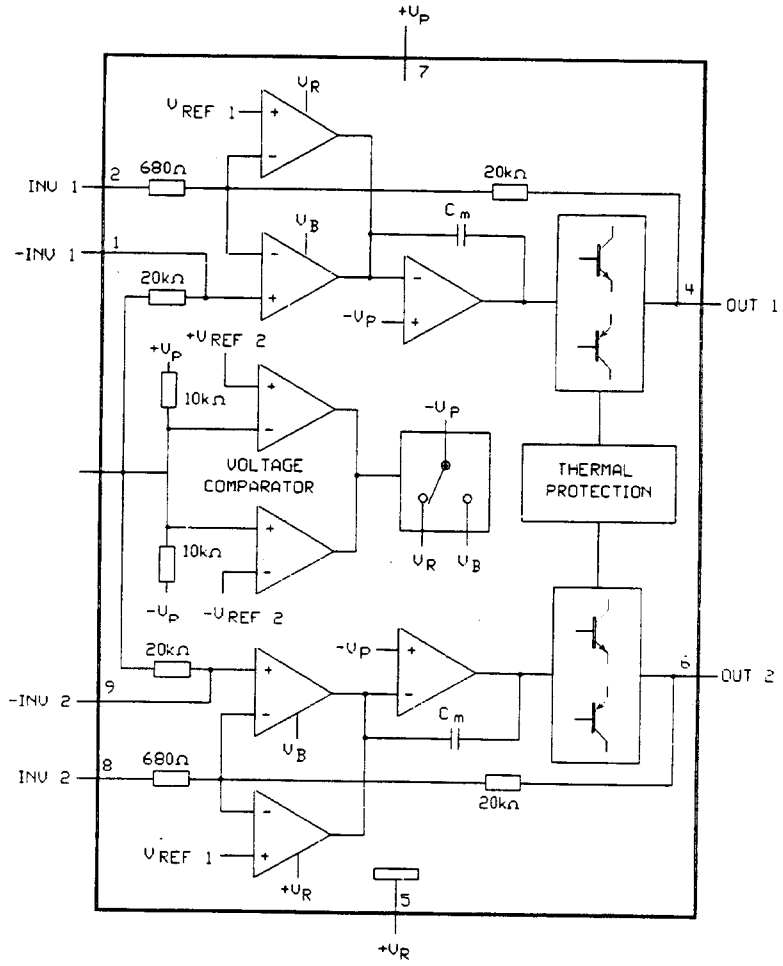
2 X 6W HI-FI AUDIO POWER AMPLIFIER

GENERAL DESCRIPTION: The TDA1521A is dual hi-fi audio power amplifier encapsulated in a 9-lead plastic power package. The device is especially designed for mains fed applications.

FEATURES :

- Requires very few external components
- Input muted during power-on and off (no switch-on or switch-off clicks)
- Low offset voltage between output and ground
- Excellent gain balance between channels
- Hi-fi according to IEC 268 and DIN 45500
- Short - circuit - proof
- Thermally protected

PINNING	PIN VOLTAGE
1. Non-inverting Input 1	: 13.5V
2. Inverting Input 1	: 13.7V
3. Ground	: 13.6V
4. Output 1	: 13.7V
5. Negative Supply Voltage	: 0V
6. Output 2	: 13.67V
7. Positive Supply Voltage	: 27.18V
8. Inverting Input 2	: 13.65V
9. Inverting Input 2	: 13.4V



BLOCK DIAGRAM OF TDA1521A

TDA3857

QUASI-SPLIT SOUND PROCESSOR WITH TWO FM DEMODULATORS

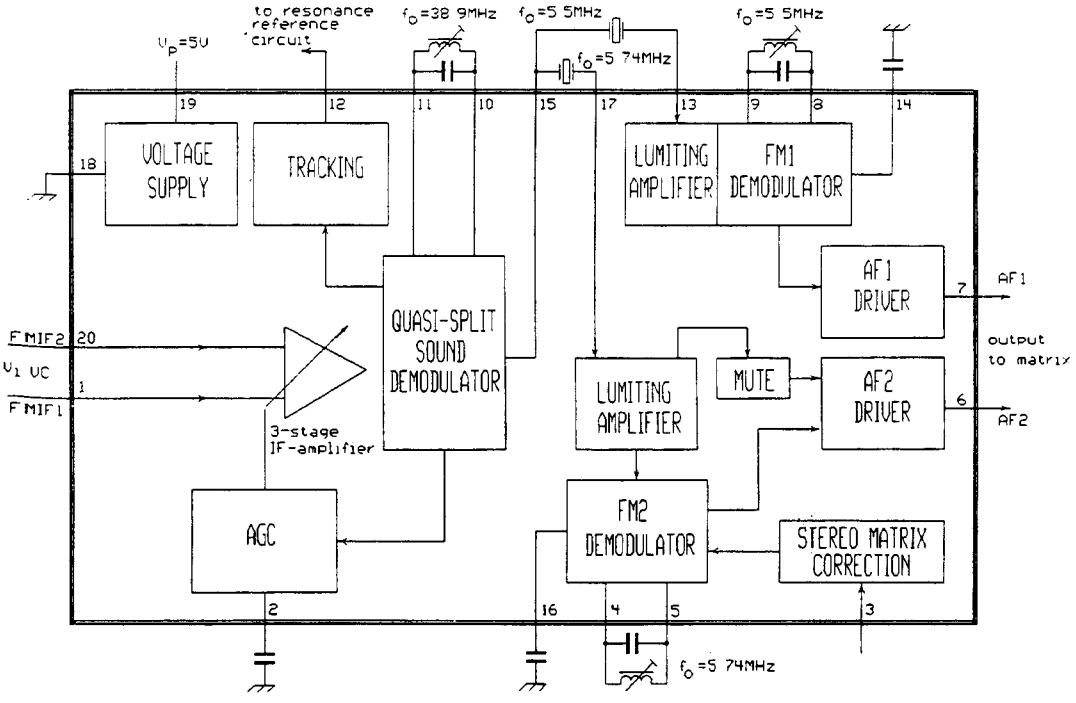
GENERAL DESCRIPTION: Symmetrical IF inputs. Gain controlled wideband IF amplifier. AGC generation due to peak sync Reference amplifier for the generation of the vision carrier. Optimized limiting amplifier for AM suppression in the regenerated vision carrier signal and 90° phase shifter. Intercarrier mixer for FM sound, output with low-pass filter. Separate signal processing for 5.5 and 5.74MHz. intercarriers. Wide supply voltage range, only 300mW power dissipation at 5V.

FEATURES

- Quasi-split sound processor for all FM standards e. g. B/G
- Reducing of spurious video signals by tracking function and AFC for the vision carrier reference circuit; (indispensable for NICAM)
- Automatic muting of the AF2 signal (at B/G) by the input level.
- Layaut-compatible with TDA3856 (24 pins) and TDA3858 (32 pins)

PINNING — PIN VOLTAGE

1. If difference input 1 for B/G standard (38.9MHz) ..... : 1.8V
2. Charge capacitor for AM AGC ..... : 2.06V
3. Input for stereo matrix correction ..... : 2.5V
4. Reference circuit for FM2 (5.74MHz) ..... : 1.8V
5. Reference circuit for FM2 (5.74MHz) ..... : 1.8V
6. AF2 output (Af out of 5.74MHz) ..... : 2.13V
7. AF1 output (Af out of 5.5MHz or AM) ..... : 2.1V
8. Reference circuit for FM1 (5.5MHz) ..... : 1.8V
9. Reference circuit for FM1 (5.5MHz) ..... : 1.8V
10. Reference circuit for vision carrier (38.9MHz) ..... : 4V
11. Reference circuit for the vision carrier (38.9MHz) ..... : 4V
12. DC output level for tracking ..... : 2V
13. Intercarrier input for FM1 (5.5MHz) ..... : 0V
14. DC-decoupling capacitor for FM1 demodufator (AF1) ..... : 2.48V
15. Intercarrier output signal (5.5/5.74MHz) ..... : 1.55V
16. DC-decoupling capacitor for FM2 demodulator (AF2) ..... : 1.8V
17. Intercarrier input for (5.74MHz) ..... : 0.11V
18. Ground ..... : 0V
19. +5.....+8V dupply voltage (Pin 28 not connected) ..... : 5V
20. If difference input 2 for B/G standard (38.9MHz) ..... : 1.8V



BLOCK DIAGRAM OF TDA3857

TDA8425/V7

HI-FI STEREO AUDIO PROCESSOR; I^2C-BUS

GENERAL DESCRIPTION: The TDA8425 is monolithic bipolar integrated stereo sound circuit with a loudspeaker channel facility, digitally controlled via the I^2C-bus for application in hi-fi audio and television sound.

FEATURES :

- Source and mode selector for two stereo channels
- Pseudo stereo, spatial stereo, linear stereo and forced mono switch
- Volume and balance control
- Bass, treble and mute controla
- Power supply with power-on reset

PINNING	PIN VOLTAGE
1. Input 2 (Left)	: 5.83V
2. External decouplage capacitor (V_{CAP})	: 11.66V
3. Input 2 (Right)	: 5.84V
4. Supply voltage	: 11.76V
5. Ground	: 0V
6. Bass (Right)	: 5.84V
7. Bass (Right)	: 5.85V
8. Treble (Right)	: 5.85V

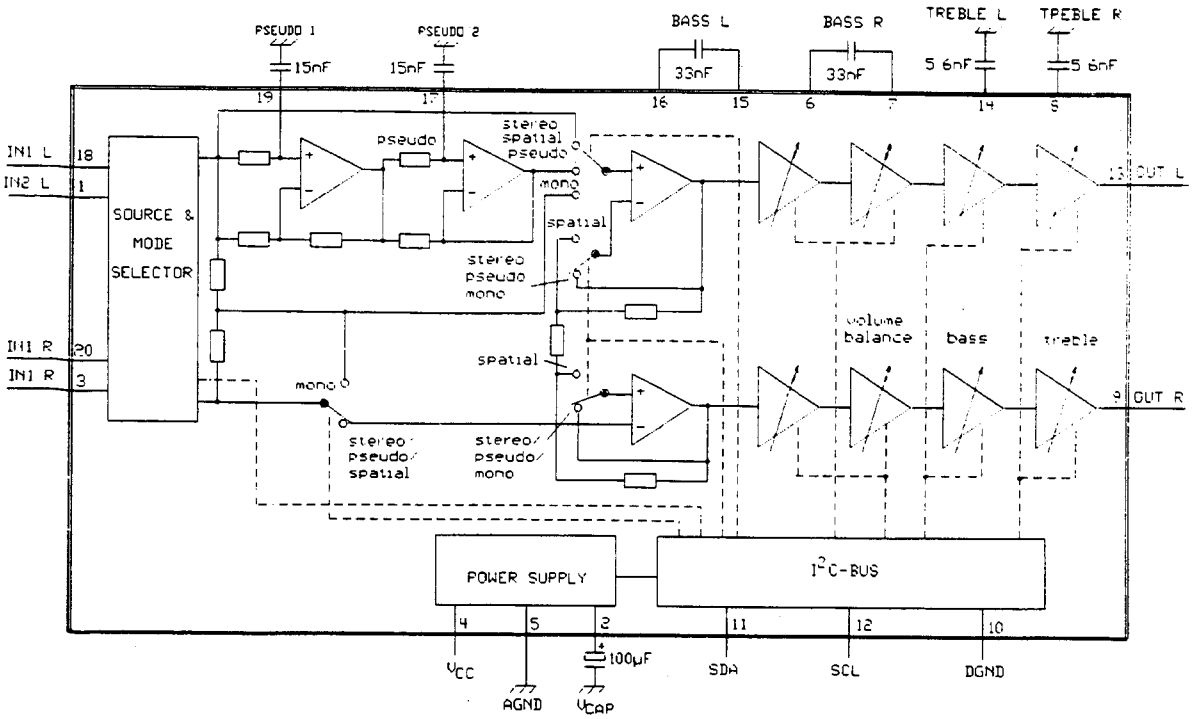
18. Input 1 (Left)	: 5.83V
19. External capacitor 1	: 5.83V
20. Input (Right)	: 5.83V



BLOCK DIAGRAM OF TDA8425

TDA2611A

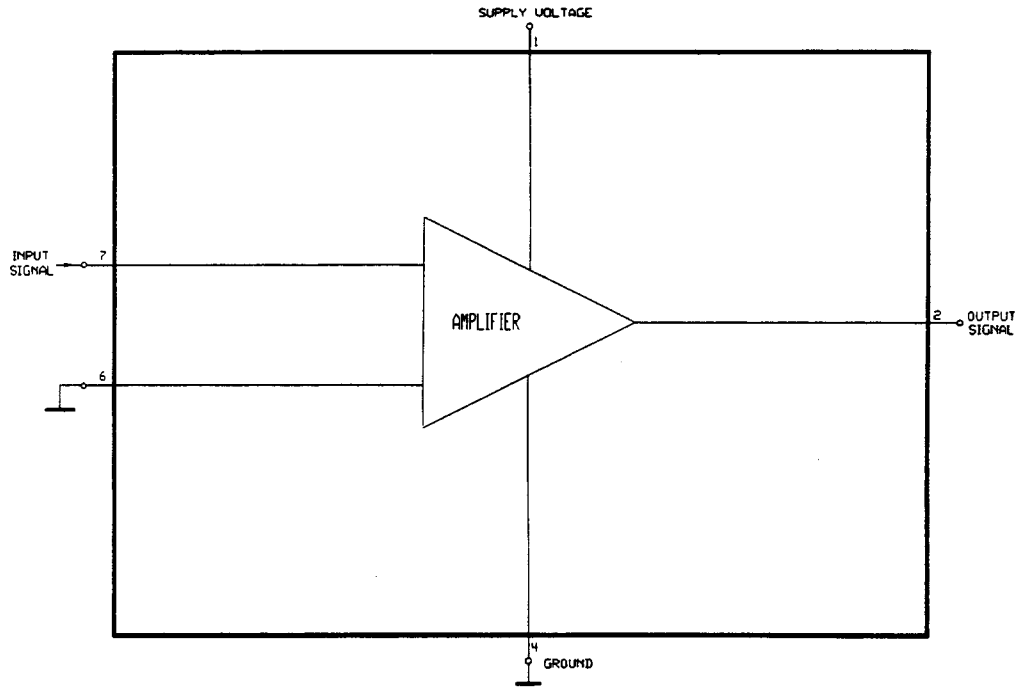
5 W AUDIO POWER AMPLIFIER

GENERAL DESCRIPTION: The TDA2611A is a 5 watt, high supply voltage, audio amplifier used for sound power amplification purposes in TV broadcasting.

FEATURES :

- Possibility for increasing the input impedance
- Single in-line (SIL) construction for easy mounting
- Very suitable for application in mains-fed apparatus
- Extremely low number of external components
- Thermal protection
- Well defined open loop gain circuitry with simple quiescent current setting and fixed integrated closed loop gain

PINNING	PIN VOLTAGE
1. Supply Voltage Input	: 28V
2. Amplified Signal Output	: 2.2VPP 1KHz, 13.2V DC, 14.2V (Mute)
3. No Connection	: -
4. Ground	: -
5. No Connection	: -
6. Ground	: -
7. Input Signal	: 1.25V
8. No Connection	: -
9. Input Impedanceri	: -



BLOCK DIAGRAM OF TDA2611A

TDA9840

STEREO / DUAL SOUND PROCESSOR WITH DIGITAL IDENTIFICATION

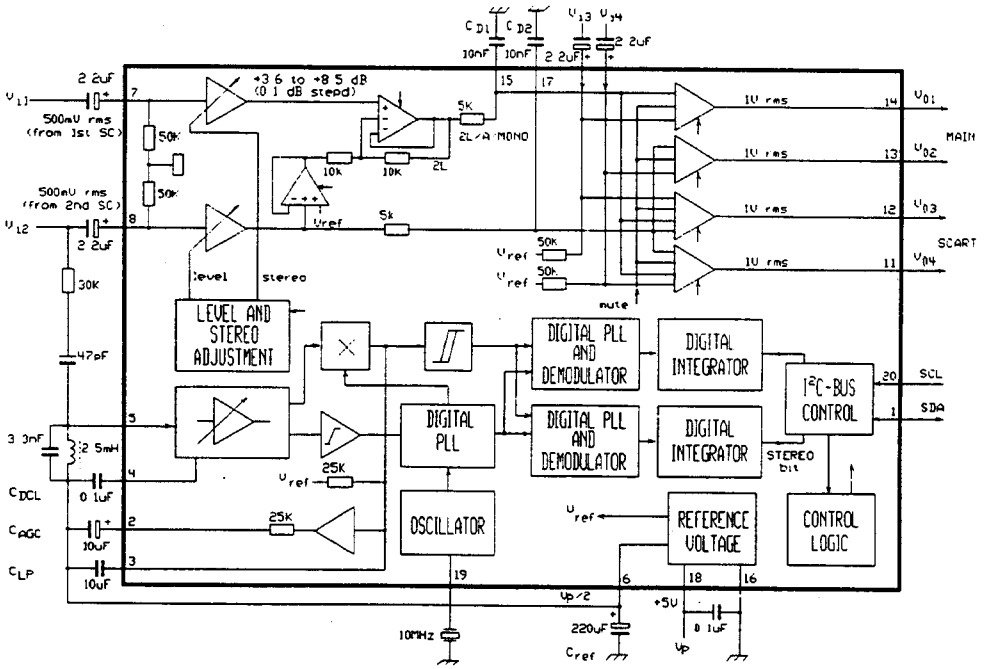
GENERAL DESCRIPTION: The TDA9840 is a stereo/dual sound processor for TV and VRT sets. Its digital identification ensures safe operation by using internal digital PLL filter technique with extremely small bandwidth (switching time maximum 2 s).

FEATURES

- Level and stereo matrix adjustment possible via the I^2C-bus.
- Two additional AF inputs for NICAM and AM sound.
- Outputs for MAIN and SCART.
- AF input and AF output signals selectable via the I^2C-bus.
- Pilot frequency regeneration for mixer by digital PLL.
- Demodulation of sound identification (117 and 274Hz) by digital PLL and digital integration.
- Information for idendified transmission mode readable via the I^2C-bus.
- Supply voltage +5 to +8V.

PINNING — PIN VOLTAGE

1. I^2C-bus data line ..... : 2.8V
2. AGC capacitor of pilot frequency amplifier ..... : 3.4V
3. LOW-PASS capacitor ..... : 2.7V
4. DC loop capacitor ..... : 2.5V
5. Pilot frequency input ..... : 2.52V
6. Capacitor of reference voltage (Vp/2) ..... : 2.52V
7. AF input 1 signal (From 1st sound carrier) ..... : 2.5V
8. AF input 2 signal (From 2nd sound carrier) ..... : 2.5V
9. AF input 3 signal (Additional input) ..... : 2.5V
10. AF input 4 signal (Additional input) ..... : 2.5V
11. AF output 4 signal ..... : 2.5V
12. AF output 3 signal ..... : 2.53V
13. AF output 2 signal ..... : 2.5V
14. AF output 1 signal ..... : 2.5V
15. 50us De-emphasis capacitor of channel 1 ..... : 2.5V
16. Ground ..... : 0V
17. 50us De-emphasis capacitor of channel 2 ..... : 2.5V
18. Supply voltage (+5 to +8V) ..... : 5V
19. 10MHz crystal ..... : 3.3V
20. I^2C-bus clock line ..... : 3.15V



BLOCK DIAGRAM OF TDA9840

TDA8416

TV AND VTR STEREO/DUAL SOUND PROCESSOR WITH INTEGRATED FILTERS AND I²C-BUS CONTROL

GENERAL DESCRIPTION: The TDA8416 is a processor of stereo/dual language signals (B/G-standard) for stereo sound television receivers and VTRs, using the switched-capacitor technque. The AF signals at the TDA8416 inputs must be "(L+R)/2" or "language A" on one channel and "R" or "language B" on the second channel (where L = left and R = right). The carrier frequency of the second channel is also modulated by an identification signal (stereo or dual sound). The device is controlled by a microcomputer via the two-line, bidirectional I2C-bus.

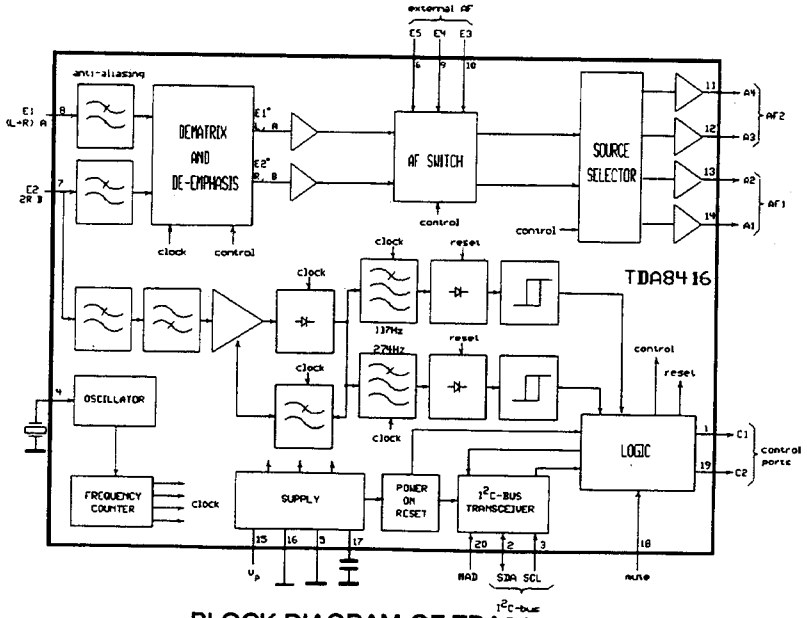
FEATURES

- Use of the switched-capacitor technique for signal processing.
- Small amount of peripheral components.
- Integrated anti-aliasing filters.
- Low distortion AF signal handling.
- Integrated de-emphasis with a time constant of 50us.
- Two general purpose output ports.
- Full ESD protection.

PINNING

PIN VOLTAGE

1. Control port C1 ..... : 5.7V
2. SDA, serial data line (I2C-bus) ..... : 11.5V
3. SCL, serial clock line (I2C-bus) ..... : 5.7V
4. Oscillator input (Or Quartz) ..... : 11.6V
5. Digital ground ..... : 0V
6. External af input (E5) ..... : 5.7V
7. Sound channel input AF2 (E2) ..... : 5.8V
8. Sound channel input AF1 (E1) ..... : 5.8V
9. External AF input (E4) ..... : 5.8V
10. External AF input (E3) ..... : 0V
11. Output A4 AF 2 output ..... : 3.10V
12. Output A3 AF 2 output ..... : 3.16V
13. Output A2 AF 1 output ..... : 5.78V
14. Output A1 AF 1 output ..... : 5.78V
15. Supply voltage Vp ..... : 5.78V
16. Analogue ground ..... : 5.76V
17. Ripple rejection improvement ..... : 5.75V
18. Mute input ..... : 5.75V
19. Control port C2 ..... : 5.75V
20. Module address (Mod) ..... : 5.75



BLOCK DIAGRAM OF TDA8416

TDA2546A

5.5 MHz DEMODULATION

GENERAL DESCRIPTION: The TDA2546A is monolithic integrated circuit for quasi-split-sound processing 5.5MHz demodulation, in television receivers.

FEATURES :

1st i.f. (V.C.: vision carrier plus S.C.: sound carrier

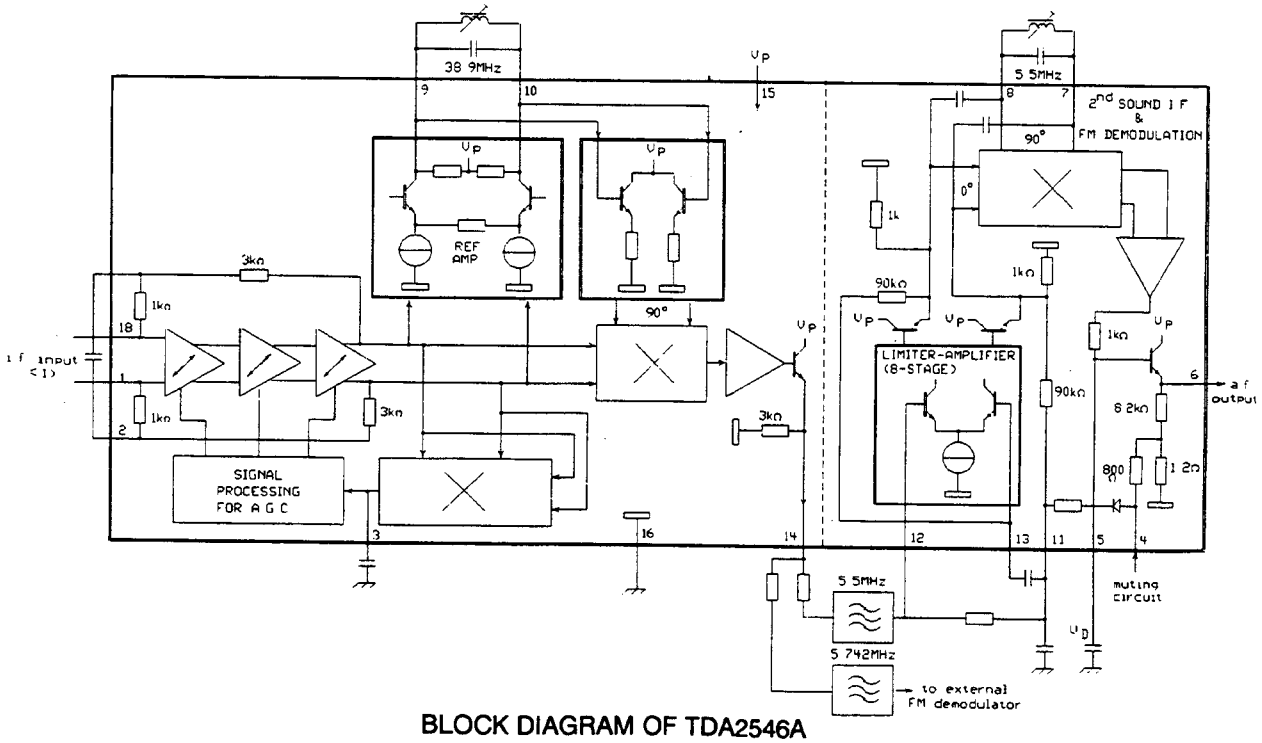
- 3-stage gain controlled i.f. amplifier.
- A.G.C. circuit.
- Reference amplifier and limiter amplifier for vision carrier (V.C.) processing.
- Linear multiplier for quadrature demodulation.

2nd i.f. (5.5MHz signal)

- 8-stage limiter amplifier
- Quadrature demodulator
- A.F. amplifier with de-emphasis
- AV switch

PINNING — PIN VOLTAGE

1. If input 1 ..... :4.8V
2. G-STAB ..... :4.8V
3. C AGC ..... :6.15V
4. Muting ..... :0.6V
5. Af deemphasis ..... :4.77V
6. Af output ..... :4.12V
7. FM demodulator input ..... :3V
8. FM demodulator output ..... :3V
9. Vision demodulator input ..... :5.64V
10. Vision demodulator output ..... :5.64V
11. Reference voltage ..... :2V
12. FM input ..... :2V
13. FM reference ..... :2V
14. Intercorrier output ..... :6.08V
15. Supply voltage ..... :12.52V
16. Ground ..... :0V
17. G-STAP ..... :4.8V
18. If input 2 ..... :4.83V



BLOCK DIAGRAM OF TDA2546A

SAA5254P/T

INTEGRATED VIP AND TELETEXT (IVT1.1X)

GENERAL DESCRIPTION: This complete single page teletext decoder is a derivative from the SAA5244A, it overcomes the one weakness of this device by incorporating automatic packet 26 processing for language extension. The SAA5244A was restricted to the main West European languages since it could only handle 7-bit data, the inclusion of the automatic X/26 processing increases the range of countries to include all those currently transmitting World System Teletext.

FEATURES

- Completed teletext decoder including page memory and FASTEXT links in a single 40-pin DIL package
- Automatic processing of extension packet 26 for widest possible language decoding.
- 100% hardware-compatible with the SAA5244 - plug-in replacement and extra market.
- 100% software compatible with the SAA5244 - except if the special OSD symbols were used with the SAA5244A.
- Low software overhead for the control microprocessor.
- Wide range of language options will be available :
  - /E West European
  - /H East European
  - /T Euro-Turkish

  Contact IPM for the latest available options.
- Hardware and software compatible to the SAA5249 "Instant" access teletext decoder.

PINNING

	PIN VOLTAGE TV	TEXT
1. V_{DD} +5V digital supply voltage	5V	5V
2. OSCOUT, 27 MHz crystal oscillator output	2V	2V

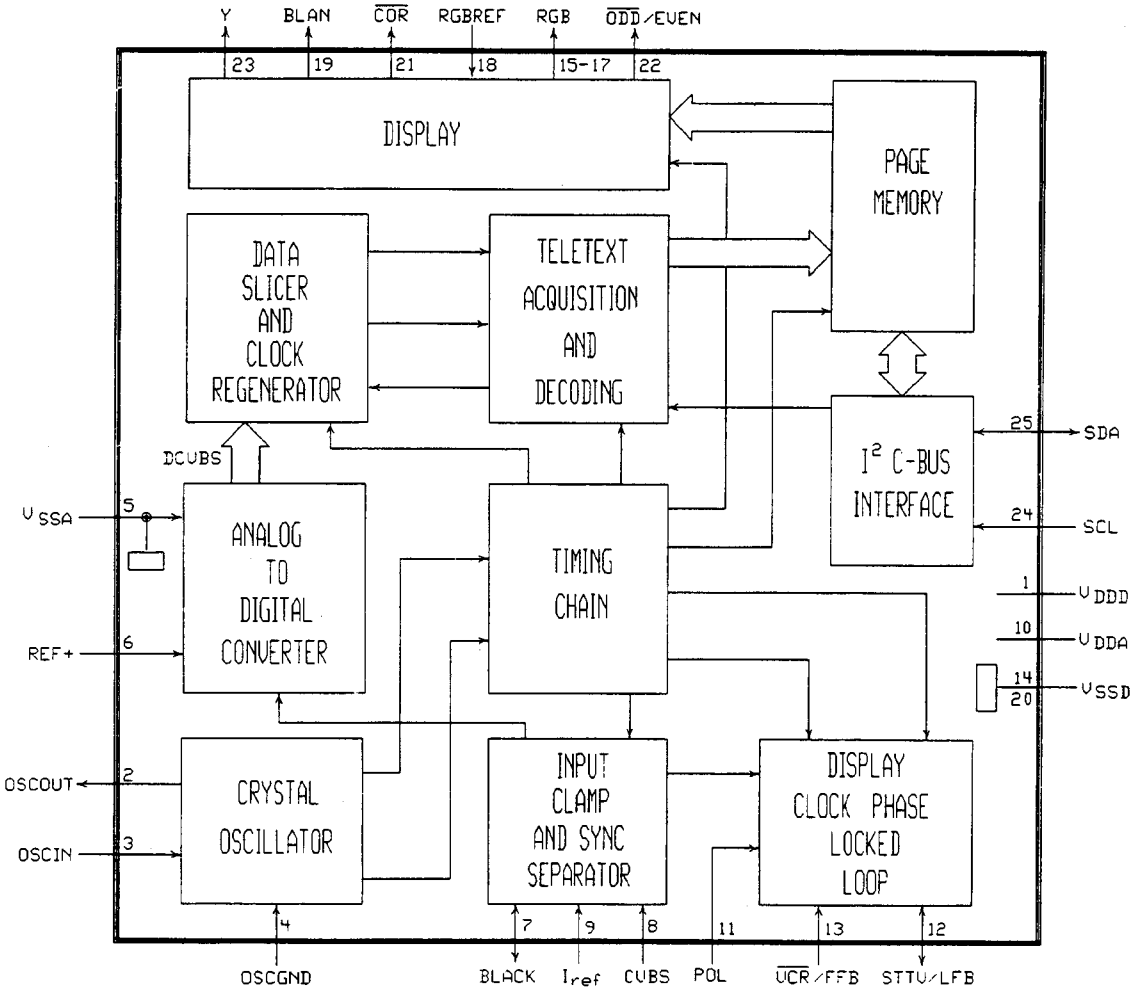
19. BLAN, Dot rate fast blanking output	0V	3V
20. VSS(D), digital ground	0V	0V
21. COR, Programmable output to provide contrast reduction of the TV picture for mixed text and picture displays or when viewing newsflash/subtitle pages. Open drain circuit	4V	0V
22. ODD/EVEN, 25Hz output synchronized with the CVBS input's field sync pulses to produce a non-interlaced display by adjustment of the vertical deflection currents	0V	2.5V
23. Y, Dot rate character output of teletext foreground coulor information	0V	0V
24. SCL, Serial clock input for I2C-bus.	5V	3V
25. SDA, Serial data port for the I2C-bus.	5V	2.5V
26-40. i.c., Internally connected. Must be left open circuit in application	5V	5V



BLOCK DIAGRAM OF SAA5254P/T

SAA5246AP/T

INTEGRATED VIP AND TELETEXT (IVT)

GENERAL DESCRIPTION: The Integrated VIP and Teletext (IVT) is a teletext decoder (contained within a single chip package) for decoding 625-line based World System Teletext transmissions. The teletext decoder hardware is based on the Enhanced Computer Controlled Teletext (ECCT) device (SAA5243) with some additional features; existing ECCT software remains compatible.
The Video Input Processor (VIP) section of the device uses mixed analog and digital designs for the data slicer and the display clock phase-locked loop functions. As a result the number of external components is greatly reduced and no critical or adjustable components are required.

FEATURES

- Complete teletext decoder in a single package
- Single +5V power supply
- Digital data slicer and display clock phase-locked loop reduce peripharel components to a minimum
- Both video and scan related synchronization modes are supported
- 4/8 page acquisition system is software compatible with ECCT
- RGB interface to standard colour decoder ICs, push-pull output drive; requires only 2 external resistors
- Data capture performance comparable with SAA5231 (VIP2)
- Software compatibility with ECCT maintained
- Interfaces with 8K x 8-bit static RAM
- Optional storage of packet 24 in the display memory
- Packet 8/30/2 mapped to a different extension chapter, as an aid for VCR programming applications
- Automatic ODD/EVEN output control
- Control of display PLL free-run and rolling header via I2C-bus
- Software readable ROM version national option
- No vertical jitter in absence of input signal and reduced horizontal jitter
- Rolling headers correctly disabled

PCF 84C81

SINGLE-CHIP 8-BIT MICROPHOTOGRAPH

GENERAL DESCRIPTION: An advanced CMOS process is used to manufacture the PCF 84C81 microcontroller. It has 20 quasi-bidirectional I/O port lines, a serial I/O interface, a single-level vectored interrupt structure, an 8-bit timer/event counter, on-chip clock oscillator and clock circuits. This efficient controller also perform well as arithmetic processor. It has facilities for both binary and BCD arithmetic plus bit-handling capabilities.

FEATURES:

- 8K x 8 ROM
- 256 x 8 RAM
- 20 quasi-bidirectional I/O port lines
- Two test inputs, one of which is also the external interrupt input
- Single-level vectored interrupts: external, timer/event counter and serial I/O
- Interface for serial data transfer on two lines (serial I/O data via an existing port line and clock via a dedicated line)
- 8-bit programmable timer/event counter
- Clock frequency range: 100 KHz to 10 MHz
- Over 80 instructions all of 1 or 2 cycles
- Single supply voltage (2.5 to 5.5 V)
- STOP and IDLE modes
- Power-on reset circuit
- Operating temperature range: -40 to +85°C

PINNING
